

## What is working well with ICT integration?

- Using the computers and iPads for our IB units
- Student are very excited using technology to research and read short text about our IB units.
- I am getting new ideas about how to incorporate technology during IB Unit implementation.
- n/a
- Sharing ideas like those at the staff meeting are important because it gives me more ideas to use. Just getting the students in the computers is so important as well. I also think the planning time we spend with Chrissy helps so that the lessons are connected to what we are learning.
- Students are very engaged and highly motivated. They take to it like fish to water. There is a high level of ownership by students.
- Upper grades are using Internet to find unknown words to support close reading strategies. Also, some kids are playing literacy and/ or math games to support instruction.
- Students are enjoying recording their performances. They are noticing positive and negative things about themselves they wouldn't ordinary see.
- Students have more options for summative assessments.
- not applicable at this time
- It is an expectation that ICT is integrated in IB guidelines. I feel we are doing a great job integrating early on in the process as we are developing our units.
- within the last few months kids are getting regular access to Ipad and Computer. They are working on using the mouse and navigating the Ipad.
- So far the students are working with YouTube videos ( how to) and websites that support literacy instruction in Spanish.
- communicating understanding through different media and apps
- Chrissy coming into the classroom to work with the content not something independent, I am happy with the weekly meetings, knowing what is coming before the designated time.
- Collaboration with Chrissy; new apps; students are more engaged and motivated; students uploading own photos for the first time
- It is now more authentic I feel, being able to connect with the content
- Students are using technology integrated to content.
- Chrissy joining our planning time
- Increased student engagement

# What could be improved changed with ICT integration?

- Teaching students basic typing skills. I think that will help things move faster when using the computers and iPads
- Having more iPads in the classrooms twice a week
- Create an updated page in Google docs for apps and or websites to use in the classroom
- suggestion first grade 1C could be paired up with 3C once a week ( half class) to learn computer skills. The other group could be going to the library with classroom teacher or activity with the other teacher.....
- Nothing... Yet? I feel the more we learn together, the more we need to share.
- Sometimes the fun/novelty aspect overshadows the educational. Kids sometimes have difficulty showcasing actual learning.
- SPED meeting with Chrissy for ideas
- I need to look up more ways I can use technology in class.
- SPED students not being able to participate from complete ICT time.
- hardware - a few more iPads for the art program would be great
- Could we look into purchasing more iPads for K-2? They have given me feedback that they would like to do more with integration of technology.
- I need to think of ways to use more technology and then take the time to learn it myself and then teach the kids. Maybe think of areas not often thought about, like Math.
- Finding ways to do tasks using technology such as creating mindmap on computer instead of paper or using the doodle cast as assessment.
- students choosing which tech and apps would be the best format to communicate their messages
- No comment
- Share resources/web sites across the school
- Discussing digital citizenship, a system for iPad checkout, more iPads??! :)
- Be able to discuss and assess students together. There is no time for that.
- Having easier access to chrome books
- Data collection to measure progress

## What supports do you need to integrate ICT?

- A more up to date iPad
- Have Chrissy provide us with a list of websites that are available and implement them in our classroom for
- iPads for each child in the classroom or more computers
- CHRISSY in my classroom!!!!
- ? Nothing I can think of
- Continued help from Chrissy. It has been working great so far.
- Not really sure, Limited time per group makes it difficult to incorporate more technology and kids have such speci goals to address.
- I need to put more thought into this.
- Maybe have more training using tools. Like google classroom.
- trying to plan a project for fifth grade for end of year... i will request support from Chrissy and fifth grade teachers
- We've asked Chrissy to keep a log of what she is introducing by grade level so that teachers are aware what their incoming students have been exposed to the year before.
- another computer in the classroom would be great and maybe a couple of Ipads/tablets that could just be part of K full time. I am never too sure about where the Ipads are or who is using them when.
- Staff meetings like this to connect with what other are doing. I got many ideas today.
- practice and time to make the use of them more fluent
- No comment
- Chrissy brings many new ideas each week. For now I don't think any other supports are needed.
- Time to plan with teachers, Wednesday Grade level meetings are a huge help for me!
- Having Chrissy available once a week has been going well. So far I don't think I need support.
- Having easier access to chrome books
- I need more ideas of how to infuse tech in to my work towards meeting IEP goals.
